C:\Users\WWDAGUtilityAccount>py --help
Python Launcher for Windows Version 3.14.3

usage:
py [launcher-args] [python-args] [script [script-args]]

Launcher arguments:
-2       : Launch the latest Python 2.x version
-3       : Launch the latest Python 3.x version
-X.Y     : Launch the specified Python version

The above default to an architecture native runtime, but will select any
available. Add a "-32" to the argument to only launch 32-bit runtimes,
or add "-64" to omit 32-bit runtimes (this latter option is deprecated).

To select a specific runtime, use the -V: options.

-V:TAG           : Launch a Python runtime with the specified tag
-V:COMPANY/TAG   : Launch a Python runtime from the specified company and
                  with the specified tag

-O --list        : List the available pythons
-Op --list-paths : List with paths

If no options are given but a script is specified, the script is checked for a
shebang line. Otherwise, an active virtual environment or global default will
be selected.

다른 버전의 Python 설치

- 파이썬 공식 홈페이지에서 원하는 버전을 다운 받아서 설치
- 설치시 슬라이드 3번에 있는 것처럼 설치 제일 처음 단계에서 맨 밑에 있는 체크 박스(Path 추가)를 해제
- 일단 다른 버전을 설치하고 나면 `py --list` 명령어가 설치된 모든 버전을 출력

Python 설치 자체를 관리하고 싶으면

- pyenv / pyenv-win (윈도우용)
- uv

uv 다운로드 URL

<https://docs.astral.sh/uv/getting-started/installation/>
